

# GRAPHENE COATING

## Graphene Ceramic Coating

### Description :

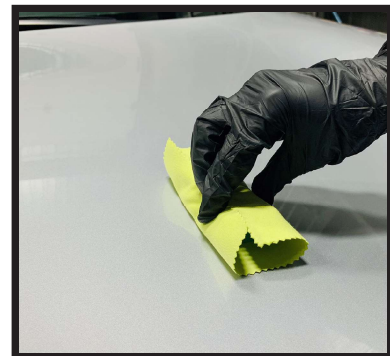

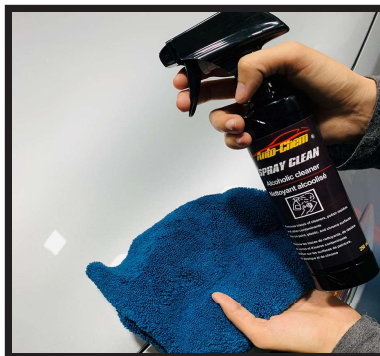

Auto-Chem's GRAPHENE ceramic treatment is a nano-ceramic coating that protects your vehicle against bad weather conditions, UV rays and chemical contaminants. Its hydrophobic properties repel water, dirt and other contaminants that can damage your vehicle's paint in the long-term. GRAPHENE allows your vehicle to stay clean and sparkle much longer, while minimizing the risk of paint scratches. Provides protection of 5 years and more.

### Advantages :

- A bottle treats one vehicle.
- A hardness of 10H, minimizes the risk of scratches on the paint.
- Provides protection of 5 years and more.
- Spectacular hydrophobic property.
- Dramatically reduces dirt build-up.
- Applicable on paint, headlights, chromes, wheels and trims.

### Instructions :

- 1) Wash the vehicle thoroughly using ULTRA BRITE soap # 801-032. For best results, decontaminate your vehicle using the # 4026 clay glove.
- 2) We strongly recommend polishing the vehicle before application. It is essential that your vehicle is clean and sparkling. Clean with the PREP SPRAY #721-008 and then dry with a microfiber cloth.
- 3) Wrap the microsuede cloth around the sponge and apply the product liberally to the cloth after shaking it.
- 4) For ease of application. Always proceed in a small section. The application must be done from left to right vertically and then horizontally thereafter. Wipe off the treated section after 2-3 minutes or when the surface becomes sticky.
- 5) When the GRAPHENE treatment is completed, wait 24 hours before using your vehicle. The vehicle must be protected from inclement weather during this period of time.
