

BANANA WAX

Hybrid Ceramic Wax

Description :

BANANA WAX combines synthetic polymers and SiO² technology which promotes shine, glide and a water-repellent effect on painted or plastic surfaces. Easy to use. Spray on and wipe off for a mirror finish, especially on dark colors. Preserves and renews the original shine. Easily removes finger marks and leaves a brilliant shine.

BANANA WAX is one of the most revolutionary sprayable hybrid ceramic liquid wax ever created to quickly polish your car. Formulated with SiO₂ (ceramic infusion) which combines the durability of synthetic polymers and the glide of PTFE to optimize the protection of your paint against the harmful effects of the environment such as soot, acid rain, UV rays, sap, bird droppings and road salt.

This unique wax can be sprayed on a dry, clean or wet surface after washing the vehicle, moisture will act as a catalyst for SiO² to give you exceptional durability.

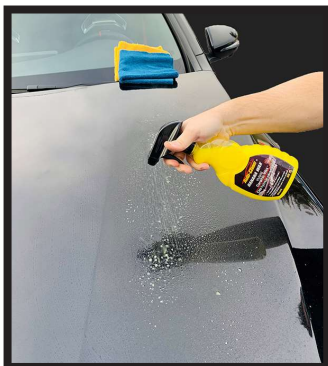

Advantages :

- Hybrid technology 3.1 for a wet look finish.
- Gloss finish for all type surfaces.
- Enhances the brilliance of dark colors.
- Intensifies the durability of previous wax, sealant and ceramic coating.

Instructions :

This product can be worked on a wet vehicle after washing the bodywork or on a dry and clean surface.

Spray directly on the paint and spread evenly with a #2012 microfiber cloth. Wipe and polish to obtain a high gloss finish. Be sure to use a dry microfiber for the final polish.
