

## **BLACK WAX** Black Finishing Wax

### Description :

The Auto-Chem Black Wax quickly restores and cleans oxidized finishes and micro scratches in a single operation on dark paints. Contains black paint pigments and carnauba wax covering scratches for a glossy, swirl free finish.

Applied by hand or with a double action polisher, the black wax fills micro cavities caused by rock chips on the front bumper and hood.

NOTE: For highly oxidized finishes, pre-clean with the appropriate Auto-Chem cleaners before applying the Black Wax.

### Advantages :

- Can be applied by hand or with DA polisher.
- Can treat 6 vehicles of average size per 500 ML.
- Offers a minimum durability of 2 to 3 months.
- Black Wax fills the micro cavities.
- Excellent on all dark colours such as: Black, Green, Blue, Burgundy and Dark Gray.

### Instructions :

\* Shake well before use.

#### **Application by DA Double Action Polisher**

- 1- Apply a good amount of BLACK WAX to the surface to be treated with the appropriate pad. Spread the product about 0.18 cm<sup>2</sup> (2 square feet) before operating the polisher to avoid splashing.
- 2- Use a DA double action polisher. While applying medium pressure, let the polisher work slowly until a shiny finish appears; if necessary wipe with a microfiber cloth.
- 3- For best results, repeat step (1) using a black foam pad.

#### **Application by hand**

- 1- Saturate a terry cloth wax applicator and apply with a light pressure on a surface of 0.18 m<sup>2</sup> (2 sq. Ft.) in a random circular pattern to allow the black pigments to penetrate. Let it dry to get a haze, (5 minutes).
- 2- Remove the haze with a clean polishing cloth.

\* For highly oxidized finishes, use the appropriate liquids or polishes in the Auto-Chem line.
